## Blue Sky Network Releases Satellite Communications Kit for Vehicle Fleet Tracking and Management

*GPS Tracking Solution Provides Cost-Effective, Advanced Global Fleet Management*

LA JOLLA, Calif.--(BUSINESS WIRE)--Blue Sky Network, a leading global provider of [mobile asset management](#) and fleet management solutions using [GPS tracking](#), today announced the D411, its simplest and most affordable satellite fleet tracking solution for vehicles. Designed for fleets operating in remote areas with unreliable cellular coverage, the Iridium-based D411 ensures reliable messaging and allows fleet managers to always know the exact location of their fleet.

Integrated with Blue Sky Network's SkyRouter Web portal, vehicles using the D411 can be viewed quickly and in near real-time by fleet managers. Additionally, companies with other air, land or sea assets being monitored via SkyRouter, can view all their assets on the same online screen. For crews in potentially hostile areas, covert and quick installation of the D411 adds to driver safety. Operators can also send panic alerts via optional wired and wireless hardware should any unusual activity occur.

"The D411 marks a significant step forward for communication and safety of remote projects by finally offering fleet managers a cost-effective means for global fleet management," said Jon Gilbert, president, founder and CEO of Blue Sky Network. "We are extremely pleased that the D411 aligns with our continued goal of providing fleet tracking and management to all transportation assets."

**"The D411 marks a significant step forward for communication and safety of remote projects by finally offering fleet managers a cost-effective means for global fleet management"**

Fleet managers are able to constantly monitor driver routes and locations through automatic position reports at user defined intervals. The D411 also provides discrete inputs for monitoring vehicle activities such as lights on, vehicle on/off or other telematic data. Additionally, integrated Bluetooth will make two-way messaging possible via Bluetooth-equipped smartphones or PDAs with the future release of BSN's smartphone messaging application.

Come see us at the Global Petroleum Show in Calgary, Booth #4344.

### About Blue Sky Network

Blue Sky Network is a leading global provider of voice and data services via the Iridium satellite network. Our aviation, marine and vehicle products for [GPS tracking](#), [real time flight tracking](#) and [fleet management](#) provide reliable fleet tracking and communication services. Blue Sky Network's solutions serve the Aviation, Oil and Gas, Government, Forestry, Mining, Supply Chain Management and Intermodal Transportation markets. Founded in 2001, Blue Sky Network is headquartered in La Jolla, California with customers and distributors worldwide. For more information about our company and solutions, visit the Blue Sky Network website at [www.blueskynetwork.com](http://www.blueskynetwork.com).
